## Air Filter Products

Whether your booth is crossdraft or downdraft, a Visikon-Aire intake filter is as important to a great paint finish as the booth itself.

### Crossdraft Intake Filter

#### VR-1 – For Maximum Performance

- Provides the highest efficiency possible with minimal airflow restriction
- Specifically designed for heated booths, including downdraft booths

#### Series 55 – The First and Only

- Utilizes Visikon-Aire's unique "Never Dry" PBT-32™ tackifier and includes filter-change indicator
- Competitors call their products "Series 55", but they lack Visikon-Aire's quality, durability and performance

#### Series 45 – An Economical Choice

- Provides exceptional balance between price and performance
- Utilizes a non-migrating, user-friendly dry tack for easy installation and enhanced efficiency

### Downdraft Intake Filter

#### T-700/G\* – The Premium Product

- Prevents release of any paint damaging particles into air stream (>10 microns)
- Constructed with reinforcing scrim on air exiting side to ensure uniform air distribution
- Delivers uniform air distribution and a laminar flow throughout the paint spray booth
- UL 900 Class 1 and self extinguishing according to DIN 53438 F1
- Approved by several major automotive manufactures
